FIELD NOTES

OF THE SURVEY OF THE

WEST BOUNDARY, NORTH BOUNDARY, AND SUBDIVISIONS OF T. 25 S., R. 19 W.

Of the SALT LAKE BASE AND Meridian,

In the State of UTAH

EXECUTED BY

RALPH GENTRY, U. S. CADASTRAL ENGINEER, and CHAS. F. MOORE,

HAROLD S. PAUL AND ELMER L. SMITH

In the capacity ^{ies} of U. S. ^{Transitmen} ~~Surveyors~~, under instructions dated March 16, 1921, issued by the United States Surveyor General to govern surveys included in Group No. 98, which were approved by the Commissioner of the General Land Office, March 25, 1921.

Survey commenced July 25, 1923

Survey completed August 13, 1923

All lines colored green were surveyed by Ralph Gentry,
U. S. Cadastral Engineer.

All lines colored yellow were surveyed by Harold S. Paul,
U. S. Transitman.

All lines colored black were surveyed by Chas. F. Moore,
U. S. Transitman.

All lines colored red were surveyed by Elmer L. Smith,
U. S. Transitman.

Survey commenced July 25, 1923, and executed with Young & Sons transits No. 8570, used by Chas. F. Moore, No. 8534, used by Elmer L. Smith, No. 8573, used by Harold S. Paul, and Buff and Buff transit No. 8028, used by Ralph Gentry, and which were approved by the Asst. Supervisor of Surveys for District No. 6, in Assignment Instructions dated May 2, 1923, subject to satisfactory field tests, the records of which appear below.

TESTS OF INSTRUMENTS T. 25 S., R. 19 W.

We examine the adjustments of the transits and correct all errors, then to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observations on Polaris, I proceed as follows:

July 2, 1923; At my camp, in sec. 17, T. 26 S., R. 19 W., S. L. B. & M., with transit No. 8570, in approximate latitude $38^{\circ} 32' N.$, and longitude $113^{\circ} 57' W.$, at approximately 12h 59m a.m., l.m.t., I obs. Polaris at E. elong., with the telescope in the direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground about 8 chs. N. of this station.

At about 7h 00m a.m., l.m.t., I lay off the azimuth of Polaris $1^{\circ} 25'$ to the W., and mark the true mer. thus determined by a nail in a peg firmly driven in the ground about 8 chs. N. of this station.

Test of transit No. 8570:

July 2, 1923; At 9h 00m a.m., app.t., I set off $38^{\circ} 32'$ on the lat. arc, and $23^{\circ} 06' N.$, on the decl. arc, the line defined by the solar coinciding with the true mer.

At app. noon, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb:

Mean observed altitude.....	$74^{\circ} 33' 00''$
Reduced latitude.....	$38^{\circ} 32' 01''$ ✓
Mean watch time of observation.....	12h 41m 52s
Watch fast of local mean time.....	38m 13s ✓

At app. noon, with the lat. arc unchanged, I observe the sun on the mer., the resulting reading of the decl. arc is $23^{\circ} 05' N.$, which agrees with the calculated decl. of the sun.

TESTS OF INSTRUMENTS T. 25 S., R. 19 W.

CHAINS At 3h 00m p.m., app. t., with the lat arc unchanged, I set off $23^{\circ} 04\frac{1}{2}'$ N., on the decl. arc, the line defined by the solar coinciding with the true mer.

Test of transit No. 8534:

July 15, 1923; At this same station, at 9h 00m a.m., app. t., I set off $38^{\circ} 32'$ on the lat. arc, and $21^{\circ} 38'$ N., on the decl. arc, the line defined by the solar coinciding with the true mer.

At app. noon, with the lat. arc unchanged, I observe the sun on the mer. with the solar, the resulting reading of the decl. arc is $21^{\circ} 36\frac{1}{2}'$ N., which agrees with the calculated decl. of the sun.

At 3h 00m p.m., app. t., with the lat. arc unchanged, I set off $21^{\circ} 35\frac{1}{2}'$ N., on the decl. arc, the line defined by the solar coinciding with the true mer.

Test of transits Nos. 8028 and 8573:

July 15, 1923; in our camp in sec. 16, T. 25 S., R. 18 W., of the Salt Lake Base and Meridian, in approximate latitude $38^{\circ} 38'$ N., and longitude $113^{\circ} 48'$ W., I examine the adjustments of both instruments and correct all errors. I compare the solar apparatus by their indications hourly with a meridian established by Polaris observation as follows:

At the same station, July 15, 1923, at 8h 18m 32s p.m. by my watch, which I find to be 30m 22s fast of local mean time by a meridian observation this same day. I observe Polaris west of the meridian, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined on a peg driven firmly in the ground, about 10 chs. N.

Watch time of observation, mean of four readings

8h 18m 32s p.m.

Watch fast of local mean time 30m 22s.

Local mean time of observation is 7h 48m 10ap.m.

Azimuth of Polaris is $0^{\circ} 34'$ W. of meridian.

TEST OF INSTRUMENTS T. 25 S., R. 19 W.

This observation was taken with a Buff & Buff solar transit No. 8028, used by Ralph Gentry

July 16, 1923, at the same station, at 8h 00m a.m., app.

t., I lay off 37' to the east, and mark a point in the meridian thus determined, with a nail in a hub driven firmly in the ground, about 10 chs. N. of my station.

Then with both instruments in the meridian, we set off 38° 38' N. on the lat. arcs, and 21° 29' N., on the decl. arcs, and determine meridians with the solar attachments, which we find to agree with the true mer.

At app. noon, using Buff & Buff solar transit No. 8028,

I make a meridian observation of the sun for time and latitude; observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

Mean observed altitude	72° 49' 25"
Reduced latitude	38° 37' 56"
Mean watch time observation	12h 36m 09s p.m.
Watch fast of local mean time	30m 12s

At app. noon, with both instruments in the meridian and the lat. arcs unchanged, we find the reading of the decl. arcs to be 21° 27' N., which agrees with the calculated decl. of the sun.

At 4h 00m p.m., app. t., with the lat. arcs unchanged, we set off 21° 26' N. on the decl. arcs, and determine meridians with the solar attachments, which we find to agree with the true mer.

As all of the solar observations made during the usual hours of solar work come within 1' of the true mer., we conclude that the adjustments of the instruments are satisfactory.

Unless otherwise specified, all measurements are made with Lallie Steel Ribbon Tapes, 5 chs. in length, compared with a Lufkin Standard Steep Tape, 1 ch. in length and found to be correct. The measurements are made on the slope, the vertical angles determined, and

TEST OF INSTRUMENTS T. 25 S., R. 19 W.

the slope measurements properly reduced to true horizontal distances.

For final tests of transits Nos. 8534 and 8570 at the completion of the survey see field notes of T. 24 S., R. 19 W., under the heading of Test of Instruments.
For final tests of transits Nos. 8028 and 8573 at the completion of the survey see field notes of T. 24 S., R. 18 W., under the heading of Test of Instruments.

SURVEY OF W. BOUNDARY T. 25 S., R. 19 W.

From the standard cor. of T. 25 S., R. 19 and 20 W., which is a 3 in. iron post, set as described in survey of T. 26 S., R. 19 W.

North bet. secs. 31 and 36

Over rolling bench land through scattering timber and undergrowth

- 1.55 Road, bears NE. and SW. Gradual ascent
- 7.50 Old wagon road, bears E. and W.
- 20.70 Draw, 15 ft. deep, drains W.
- 40.00 Set an iron post, 3 ft. long, 1 in. dia., 12 ins. in the ground, to bedrock, in a mound of stone, for $\frac{1}{4}$ sec. cor., with brass cap mkd

from which

- A juniper, 8 ins. dia., bears N 13° E., 35 lks. dist., mkd $\frac{1}{4}$ S31BT
- A juniper, 10 ins. dia., bears S 85° 30' W., 185 lks. dist., mkd $\frac{1}{4}$ S36BT

- 46.00 Draw, drains S 60° W.
- 50.66 Road, bears E. and W.
- 78.95 Road, bears N 70° W. and S 70° E.
- 80.00 Set an iron post, 3 ft. long, 2 ins. dia., 18 ins. in the ground, to bedrock, in a mound of stone, for cor. of secs. 25, 30, 31 and 36, with brass cap mkd

GENERAL DESCRIPTION.

The land in this township ranges from rough mountainous to rolling in character. It is located principally in the Mountain Home range of mountains. The main ridge and divide, known as Mountain Home, enters the township on the south boundary of sec. 33, projects north to the SE $\frac{1}{4}$ of sec. 19, and then divides into a number of smaller ridges and spurs, projecting N, NE, and NW to Snake Valley, thereby dividing the drainage into easterly, westerly, and northerly directions.

The west slope of the range is covered with a dense growth of pinon, juniper, and balsam. The predominating types of undergrowth being sagebrush, yellow top, mountain rush, service berry, and mahogany. The east slopes have a scattering growth of pinon and juniper, with an occasional grove of balsam, the undergrowth being in the main of a scattering growth. A scattering stand of both timber and undergrowth is found in the lowlands and in the foothills. There is no timber of commercial value within the entire area.

The soil is a shallow sandy clay loam, with a large portion of fragmentary rock in mixture. There are also numerous outcroppings and ledges of limestone. Generally the soil is unfit for agriculture, on account of its rocky nature. Grasses for grazing purposes are not plentiful, there being insufficient feed the year round for stock.

There is no water either for domestic or irrigation purposes within the township.

No mineral of any type of value has been found.

There are no settlers or improvements.

FIELD ASSISTANTS.

[illegible]

CERTIFICATE OF UNITED STATES SURVEYOR

Ralph Gentry, U. S. Cadastral Engineer, and Harold S. Paul, U. S. Transitman,
i, Moore, and Elmer L. Smith, U. S. Transitmen

of special instructions received from the U. S. Surveyor General for Utah
bearing date of the 16th day of March, 1921, we have well, faithfully, and in
in our own proper person,^s and in strict conformity with said instructions, the Manual of Surveying Instruc-
tions, and the laws of the United States, surveyed all those parts or portions of the west and north
boundaries and subdivisions of T. 25 S., R. 19 W.

of the Salt Lake Base
and Meridian, in the State of Utah on dates shown which are represented in
and date diagram on said diagram
the foregoing field notes as having been executed by us and under our direction; and that all the corners of
said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instruc-
tions, and the special written instructions of the U. S. Surveyor General for Utah
and in the specific manner described in the field notes, and that the foregoing are the original field notes of
such survey.

Chas. F. Moore

U. S. Transitman.

Ralph Gentry

U. S. Cadastral Engineer.

APPROVAL.

Harold S. Paul

U. S. Transitman.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah

July 23, 1924, DEX

The foregoing field notes of the survey of the west, and north boundaries, and
subdivisions of Tp. 25 S., R. 19 W. of the Salt Lake Base and
Meridian

executed by Ralph Gentry, U.S. Cadastral Engineer and Chas. F. Moore,
Harold S. Paul and Elmer L. Smith, U.S. Transitmen
under the special instructions dated March 16, 1921, 1921, having been
critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys
they describe, are hereby approved.

E. A. Johnson
U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in
has been correctly copied from the original notes on file in this office.

U. S. Surveyor General

All lines colored black were surveyed by Chas. F. Moore,
U. S. Transitman.

All lines colored red were surveyed by Elmer L. Smith,
U. S. Transitman.

Survey commenced August 3, 1923, and executed with Young & Sons transits No. 8570, used by Chas. F. Moore, and No. 8534, used by Elmer L. Smith, and which were approved by the Asst. Supervisor of Surveys for District No. 6, in Assignment Instructions dated May 2, 1923, subject to satisfactory field tests, the record of which appears below.

TESTS OF INSTRUMENTS T. 25 S., R. 20 W.

We examine the adjustments of the transits and correct all errors, then to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observations on Polaris, I proceed as follows:

Test of transit No. 8570:

July 2, 1923; At my camp in Sec. 17, T. 26 S., R. 19 W., S. L. B. & M., in approximate latitude $38^{\circ} 32'$ N., and longitude $113^{\circ} 57'$ W., at approximately 12h 59m a.m., l.m.t., I observe Polaris at E. elong., with the telescope in the direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground about 8 chs. N. of this station.

At about 7h 00m a.m., l.m.t., I lay off the azimuth of Polaris $1^{\circ} 25'$ to the W., and mark the true mer. thus determined by a nail in a peg firmly driven in the ground about 8 chs. N. of this station.

At 9h 00m a.m., app.t., I set off $38^{\circ} 32'$ on the lat. arc, and $23^{\circ} 06'$ N., on the decl. arc, the line defined by the solar coinciding with the true mer.

At app. noon, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb:

Mean observed altitude.....	$74^{\circ} 33' 00''$
Reduced latitude.....	$38^{\circ} 32' 01''$
Mean watch time of observation.....	12h 41m 52s
Watch fast of local mean time.....	38m 13s

At app. noon, with the lat. arc unchanged, I observe the sun on the mer., the resulting reading of the decl. arc is $23^{\circ} 05'$ N., which agrees with the calculated decl. of the sun.

TESTS OF INSTRUMENTS T. 25 S., R. 20 W.

At 3h 00m p.m., app.t., with the lat.arc unchanged, I set off $23^{\circ} 04\frac{1}{2}'$ N., on the decl. arc, the line defined by the solar coinciding with the true mer.

Test of transit No. 8534:

July 15, 1923; At this same station, at 9h 00m a.m., app. t., I set off $38^{\circ} 32'$ on the lat. arc, and $21^{\circ} 38'$ N., on the decl. arc, the line defined by the solar coinciding with the true mer.

At app. noon, with the lat. arc unchanged, I observe the sun on the mer. with the solar, the resulting reading of the decl. arc is $21^{\circ} 36\frac{1}{2}'$ N., which agrees with the calculated decl. of the sun.

At 3h 00m p.m., app. t., with the lat. arc unchanged, I set off $21^{\circ} 35\frac{1}{2}'$ N., on the decl. arc, the line defined by the solar coinciding with the true mer.

Tests at all hours suitable for solar observations give results which agree with the true mer., we therefore conclude that the adjustments of the instruments are satisfactory.

The instruments are tested at frequent intervals on true meridians and are personally kept in adjustment throughout the progress of the survey.

Measurements are made with a 5 ch. Lallie Steel Tape,

tested by comparison with a Lufkin Standard Steel Tape,

Measurements are reduced to true horizontal distances by the use of clinometers.

RESURVEY OF THE UTAH-NEVADA BOUNDARY LINE.

GENERAL DESCRIPTION.

This fractional township ranges from gently rolling in the northernmost portion to rough rolling bench land in the southern extremity, with no water within the entire township. The drainage is generally northwest.

The soil is mostly a sandy clay loam, with an occasional intermixture of fragmentary rock.

The township is unsuited to any kind of profitable pursuit, except stock raising. A shortage of water precludes the possibilities of agriculture.

A medium scattering growth of juniper and pinon pine covers practically the whole of the township, with the exception of the northernmost portion, where none exists.

The predominant types of undergrowth are sagebrush, bunch grass, and wild rush.

There are no settlers within the township.

The major portions of the township furnish fair grazing, there being an abundance of grass of easy access.

No indications of mineral, coal, oil or oil shale noted.

All lines dated in black were surveyed by Ralph Gentry,
U.S. Cadastral Engineer.

All lines dated in red were surveyed by Harold S. Paul,
U.S. Transitman.

Survey commenced August 3, 1923, and executed with Buff
and Buff solar transit No. 8028, used by Ralph Gentry,
U.S. Cadastral Engineer, and Young and Sons solar
transit No. 8573, used by Harold S. Paul, U.S. Transit-
man. Both instruments are equipped with Smith Solar
attachments and full vertical circles. The horizontal
limbs are each provided with two double verniers placed
opposite each other, and reading to single minutes of
arc, which is also the least count of the verniers of

T. 24 S., R. 18 W.

the latitude and declination arcs and vertical circles. The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for district No. 6, conditional upon satisfactory field tests in assignment instructions dated May 21, 1923.

We examine the adjustments of the instruments and correct all errors, then, to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observations made on Polaris, we proceed as follows.

August 3, 1923: At our camp, situated near the cor. of secs. 21, 22, 27, and 28, T. 24 S., R. 18 W., in approximated latitude $38^{\circ}43'$ N., longitude, $113^{\circ}50'30''$ W.; at 10h 51st p.m. l. m. t., with instrument No. 8028, we observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 10 chs. N.

Azimuth of Polaris at eastern elongation = $1^{\circ}25'28''$.

August 4th: We lay off the azimuth of Polaris, $1^{\circ}25'30''$ to the west, and mark the meridian thus determined by a tack in a peg driven firmly in the ground, 10 chs. N.

At 8h 30 m a.m. app. t., with both instruments in the meridian, we set off $38^{\circ}43'$ N., on the latitude arcs; $17^{\circ}25'$ N., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

At app. noon, with instrument No. 8028, we make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

T. 24 S., R. 18 W.

Mean observed altitude=	68°40'
Reduced latitude=	38°43' N.
Mean watch time of observation=	12h 32m 6s
Watch fast of local mean time=	0h 26m 1.3s

At app. noon, with the latitude arcs unchanged, we observe the sun on the meridian; the resulting readings of the declination arcs is 17°23' N., which agrees with the computed declination of the sun.

At 3h 30m p.m. app. t., with the latitude arcs unchanged, we set of 17°21' N., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

As all the solar observations during the usual hours of solar work, come within 1'30" of the true meridian, we conclude that the instruments are in satisfactory adjustment.

The instruments were kept in good adjustment throughout the progress of this survey, frequent tests being made on the meridian determined by observations on Polaris.

At the completion of the survey of this township, we make a final test of the instruments as follows.

August 13, 1923: With both instruments in the meridian established by observation on Polaris, heretofore described; at 8h 30m, a.m. app. t., we set of 38°43' N., on the latitude arcs; 14°52'30" N., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

At app. noon, with the latitude arcs unchanged, we observe the sun on the meridian; the resulting readings of the declination arcs is 14°49'30" N., which agrees with the computed declination of the sun.

At 3h 30m p.m. app. t., with the latitude arcs unchanged, we set off 14°47'30" N., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

As all the solar observation during the usual hours of

T. 24 S., R. 18 W.

solar work, come within 1'30" of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

MEASUREMENTS.

Unless otherwise specified all measurements are made with Lallie steel tapes 5 chains in length compared with a Lufkin standard steel tape and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

METHOD OF PROCEDURE.

The north boundary of this township is surveyed east to an intersection with a line projected north from the cor. of Ts. 24 and 25 S., Rs. 17 and 18 W., the fractional distance being placed in the west half mile.

The east boundary of the township is surveyed north to an intersection with a line projected east from the cor. of T. 23 S., Rs. 18 and 19 W., where the cor. of Ts. 23 and 24 S., R. 18 W. is set; the fractional distance being placed in the north half mile.

The west boundary is run north to an intersection with the south boundary of T. 23 S., R. 18 W., where the closing cor. of T. 24 S., Rs. 18 and 19 W. is set; the fractional distance being placed in the north half mile.

The south boundary of the township is provided for in the survey of the north boundary of T. 25 S., R. 18 W.; the course being N. 89°59' W., the distance 479.37 chs. and the fractional distance being placed in the west half mile.

The east and west boundaries of this township have reported as having been previously surveyed, but the only cor. found, was the cor. of Ts. 24 and 25 S., Rs. 17 and 18 W.,

Chains

which was destroyed in accordance with the special instructions issued for the survey of T. 24 S., R. 18 W. The township is subdivided in the regular manner.

GENERAL DESCRIPTION OF T. 24 S., R. 18 W.

The land within the boundaries of this township, consists of rolling desert land, with a general southwesterly exposure and drainage. A low ridge, bearing in a north-easterly and southwesterly direction, is found in the extreme south-east portion of the township. A large wash, which is the main water course in the township, heads in section 26, and drains in a northwesterly direction, leaving it on the west boundary of section 18.

GENERAL DESCRIPTION OF T. 24 S., R. 18 W.

Chains

The only timber found in the township was in the NE. portion, which consisted of very scattering bunches of scrub juniper and pinon.

The township is covered with a scattering growth of shadscale, sagebrush, greasewood and native grasses, which afford fair grazing for sheep during the winter months.

The soil consists of a deep sand and clay loam, lying on a lime and sandstone bedrock.

No water, nor indications of oil shale and mineral were found on the township.

No portion of the township is suitable for farming, as the soil requires irrigating to produce crops.

Numerous roads were found throughout the township, the main ones being the old and new Ely-Milford highways.

The new Ely-Milford highway, enters the township at the south boundary of sec. 32, and bears in a northwesterly direction, leaving it at the west boundary of sec. 19.

The old Ely-Milford highway, which is a graded road, enters the township at the east boundary of section 25, and bears in a westerly direction, leaving it at the west boundary of section 18. Numerous branch roads lead to and from the old Ely-Milford highway, over which the sheep men transport their camp supplies, to the different grazing sections of the surrounding country.

The township is used for a winter range for sheep and can only be grazed during the winter months on account of there being no water for the stock during the summer months.

No settlers were on the township at the time of the survey, and the only improvements was the old graded Ely-Milford highway.

The magnetic declination was not taken on account of a defective needle.

CERTIFICATE OF UNITED STATES
AND TRANSITMAN

We, Ralph Gentry, U.S. Cadastral Engineer, and Harold S. Paul,
U.S. Transitman, hereby certify upon honor that, in pursu-

of special instructions received from the U. S. Surveyor General for Utah
bearing date of the 22nd day of March, 1921, we have well, faithfully, and
in my ^{our} proper persons, and in strict conformity with said instructions, the Manual of Surveying Inst-
tutions, and the laws of the United States, surveyed all those parts or portions of the north, east,
and west boundaries, and subdivision of T. 24 S., R. 18 W.,

of the Salt Lake Base
And Meridian, in the State of Utah, which are represented
and date diagram on dates shown on said diagram
the foregoing field notes as having been executed by us and under ^{our} directions, and that all the corner
said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instr-
tutions, and the special written instructions of the U. S. Surveyor General for Utah
and in the specific manner described in the field notes, and that the foregoing are the original field notes
such survey.

March 20, 1924,
Salt Lake City, Utah.
March 28, 1924.
Los Angeles,
California.

Ralph Gentry
U.S. Cadastral Engineer

Harold S. Paul
APPROVAL. U.S. Transitman

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 28, 19

The foregoing field notes of the survey of the west and east boundaries; and the
survey of the north boundary and subdivisional lines of Township
No. 24 South, Range No. 18 West of the Salt Lake Base and Meridian
Utah;

executed by Ralph Gentry and Harold S. Paul

under his special instructions dated March 22, 1921, having been
critically examined, and the necessary corrections and explanations made, the said field notes, and the survey
they describe, are hereby approved.

D. A. Douglass
U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in
has been correctly copied from the original notes on file in this office.

All lines colored green were surveyed by Ralph Gentry,
U. S. Cadastral Engineer.

All lines colored black were surveyed by Chas. F. Moore,
U. S. Transitman.

All lines colored red were surveyed by Elmer L. Smith,
U. S. Transitman.

Survey commenced August 8, 1923, and executed with Young & Sons transits No. 8570, used by Chas. F. Moore, No. 8534, used by Elmer L. Smith, and Buff and Buff transit No. 8028, used by Ralph Gentry, and which were approved by the Asst. Supervisor of Surveys for District No. 6, in Assignment Instructions dated May 2, 1923, subject to satisfactory field tests, the records of which appear below.

TESTS OF INSTRUMENTS T. 24 S. R. 19 W.

We examine the adjustments of the transits and correct all errors, then to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observations on Polaris, I proceed as follows:

Tests of transits Nos. 8570 and 8534:

August 18, 1923; At my camp, near the cor. of secs. 28, 29, 32 and 33, T. 24 S., R. 19 W., S. L. B. & M., with transit No. 8570, in approximate latitude $38^{\circ} 42'$ N., a longitude $113^{\circ} 57'$ W., at approximately 9h 52m p.m., l.m.t., I observe Polaris at E. elong., with the telescope in the direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground about 10 chs. N. of this station.

August 19, 1923; At about 7h 30m a.m., l.m.t., I lay off the azimuth of Polaris $1^{\circ} 25'$ to the W., and mark the true mer. thus determined by a nail in a peg firmly driven in the ground about 10 chs. N. of this station.

At 9h 00m a.m., app. t., we set off $38^{\circ} 42'$ on the lat. arcs, and $12^{\circ} 59'$ N., on the decl. arcs, the line defined by the solar coinciding with the true mer.

At app. noon, with transit No. 8570, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

Calculated alt. of sun at app. noon:

Mean observed altitude.....	$64^{\circ} 14' 00''$ ✓
Reduced latitude.....	$38^{\circ} 42' 20''$ ✓
Mean watch time of observation.....	12h 38m 00s
Watch fast of local mean time.....	34m 18s ✓

At app. noon, with the lat. arcs unchanged, we observe the sun on the mer., the resulting readings of the decl. arcs are $12^{\circ} 56'$ N., which agrees with the calculated decl. of the sun.

TESTS OF INSTRUMENTS T. 24 S. R. 19 W.

At 3h 00m p.m., app.t., with the lat. arcs unchanged, we set off $12^{\circ} 54'$ N., on the decl. arcs, the lines defined by the solar coinciding with the true mer.

Preliminary test of transit No. 8028 will be found in field notes of survey of T. 24 S., R. 18 W.

Tests at all hours suitable for solar observations give results which agree with the true mer., we therefore conclude that the adjustments of the instruments are satisfactory.

The instruments are tested at frequent intervals on true meridians and are personally kept in adjustment throughout the progress of the survey.

Measurements are made with a 5 ch. Lallie Steel Tape, tested by comparison with a Lufkin Standard Steel Tape. Measurements are reduced to true horizontal distances by the use of clinometers.

For final test of transit No. 8028 at completion of this survey see final test of same in field notes of T. 24 S., R. 18 W.

For final tests of transits Nos. 8570 and 8534 at the completion of this survey see field notes of T. 23 S., R. 18 W., under the heading of Test of Instruments.

GENERAL DESCRIPTION.

The land in this township ranges from rolling mountainous in the southernmost sections to gently rolling bench land in the north four tiers of sections. The general drainage is in a northerly direction.

A scattering stand of pinon and juniper is found in the south two tiers of sections. The predominating types of undergrowth are sagebrush, yellow top, mountain rush, buckbrush, and bunch grass. There is no timber of commercial value within the entire township.

The soil is a shallow sandy clay loam, with a scattering intermixture of fragmentary rock and occasional ledges.

The only water to be found is at Gyp Hole, in the SW $\frac{1}{4}$ of section 32, which is a tunnel with a small stream of water running, insufficient in flow for any purpose but domestic use.

Generally the soil is unfit for agriculture, on account of its rocky nature.

Grazing throughout this area is just fair, there being insufficient feed to warrant the running of a large number of animals.

No mineral of any type of value has been found,
There are no settlers or improvements.

CERTIFICATE OF UNITED STATES SURVEYOR

CADASTRAL ENGINEER

Ralph Gentry
We Chas. F. Moore and
Elmer L. Smith

AND TRANSITMEN.

U. S. Cadastral Engineer,
Transitmen

U. S. Surveyor General, hereby certify upon honor that, in pursu-

of special instructions received from the U. S. Surveyor General for Utah

bearing date of the 22nd day of March 1921, we have well, faithfully, and

our own proper person, and in strict conformity with said instructions, the Manual of Surveying Instr-

utions, and the laws of the United States, surveyed all those parts or portions of the north and west

boundaries, and subdivisions of T. 24 S., R. 19 W.

of the Salt Lake Base

and Meridian, in the State of Utah

and date diagram which are represented

the foregoing field notes as having been executed by me, and under my direction; and that all the corner

and survey have been established and perpetuated in strict accordance with the Manual of Surveying Instr-

utions, and the special written instructions of the U. S. Surveyor General for Utah

and in the specific manner described in the field notes, and that the foregoing are the original field notes

each survey.

Utah, June 7, 1921

Utah, June 6, 1921

APPROVAL.

U. S. Transitman

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 28, 1921

The foregoing field notes of the survey of the north and west boundaries and sub-
visions of Township No. 24 South, Range No. 19 West of the Sa-
l Lake Base and Meridian, Utah,

executed by Ralph Gentry, Chas. F. Moore, and Elmer L. Smith

under the special instructions dated March 22 1921, having been
critically examined, and the necessary corrections and explanations made, the said field notes, and the survey
they describe, are hereby approved.

[Signature]
U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in

has been correctly copied from the original notes on file in this office.

FIELD NOTES

OF THE SURVEY OF THE

RESURVEY OF THE WAB-WAB GUIDE MERIDIAN, OR EAST BOUNDARY; ...

RESURVEY OF THE NORTH BOUNDARY;

AND

SURVEY OF THE SUBDIVISION

OF

TOWNSHIP NO. 24 SOUTH, RANGE NO. 17 WEST

Of the Salt Lake Base and Meridian,

in the State of Utah

EXECUTED BY

Ralph Gentry

and

Harold S. Paul

in the capacity of U.S. Cadastral Engineer and U.S. Transitman
~~Surveyor~~, under instructions dated March 22, 1921.,

issued by the United States Surveyor General to govern surveys included in

Group No. 102, which were approved by the Commissioner of the General Land

Office, April 1, 1921. And assignment instructions dated

May 2, 1923.

Survey commenced August 15, 1923.

Survey completed August 30, 1923.

All lines dated in black were surveyed by Ralph Gentry,
U.S. Cadastral Engineer.

All lines dated in red were surveyed by Harold S. Paul,
U.S. Transitman.

Survey commenced August 15, 1923, and executed with Buff
and Buff solar transit No. 8028, used by Ralph Gentry,
U.S. Cadastral Engineer, and Young and Sons solar
transit No. 8573, used by Harold S. Paul, U.S. Transi-
men. Both instruments are equipped with Smith Solar
attachments and full vertical circles. The horizontal
limbs are each provided with two double verniers placed
opposite each other, and reading to single minutes of
arc, which is also the least count of the verniers of

the latitude and declination arcs and vertical circles. The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for district No. 6 conditional upon satisfactory field tests in assignment instructions dated May 2, 1923.

We examine the adjustments of the instruments and correct all errors, then, to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observations made on Polaris, we proceed as follows.

August 14, 1923: Stationed near the corner of secs. 21, 22, 27, and 28, T. 24 S., R. 17 W., in approximate latitude $38^{\circ}43'$ N., longitude $113^{\circ}43'30''$ W.; at 10h 20m l. m. t., with instrument No. 8028, we observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 10 chs. N.

Azimuth of Polaris at eastern elongation $= 1^{\circ}25'25''$.

August 15th: We lay off the azimuth of Polaris, $1^{\circ}25'30''$ to the west, and mark the meridian thus determined by a tack in a peg driven firmly in the ground, 10 chs. N.

At 8h 30m a.m. app. t., with both instruments in the meridian, we set off $38^{\circ}43'$ N., on the latitude arcs; $14^{\circ}16'$ N., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

At app. noon, with instrument No. 8028, we make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

Mean observed altitude=

65°29'30"

Reduced latitude=

38°43' N. ✓

Mean watch time of observation=

12h 30m 32s

Watch fast of local mean time =

0h 26m 1s ✓

At app. noon, with the latitude arcs unchanged, we observe the sun on the meridian; the resulting readings of the declination arcs is 14°13'00" N., which agrees with the computed declination of the sun.

At 3h 30m p.m. app. t., with the latitude arcs unchanged, we set off 14°10' N., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

As all the solar observation during the usual hours of solar work, come within 1'30" of the true meridian, we conclude that the instruments are in satisfactory adjustment.

The instruments were kept in good adjustment throughout the progress of this survey, frequent tests being made on the meridian determined by observation on Polaris.

At the completion of the survey of this township, we make a final test of the instruments as follows.

August 30, 1923: With both instruments in the meridian determined by observations on Polaris, heretofore described; at 8h 30m a.m. app. t., we set off 38°43' N., on the latitude arcs; 9°14' N., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

At. app. noon, with the latitude arcs unchanged, we observe the sun on the meridian; the resulting readings of the declination arcs is 9°11' N., which agrees with the computed declination of the sun.

At 3h 30m p.m. app. t., with the latitude arcs unchanged, we set off 9°8' N., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

As all the solar observations made during the usual hours

of solar work, come within 1'30" of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

MEASUREMENTS.

Unless otherwise specified all measurements are made with Lallie steel tapes 5 chains in length compared with a Lufkin standard steel tape and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

METHOD OF PROCEDURE.

The survey of the west boundary of T. 24 S., R. 17 E., is provided for in the survey of the east boundary of T. 24 S., R. 18 W., the course being North, and the distance 480.00 chs.

The survey of the south boundary is provided for in the survey of the north boundary of T. 25 S., R. 17 W., the course being S. 89°59' W., and the distance 473.38 chs., and the fractional distance being placed in the west half mile.

The east boundary is surveyed North, from the cor. of Ts. 24 and 25 S., Rs. 16 and 17 W., a distance of 480.00 chs., where the cor. of Ts. 23 and 24 S., Rs. 16 and 17 W. is set.

The north boundary is surveyed to the east from the cor. of Ts. 23 and 24 S., R. 17 W. to the cor. of Ts. 23 and 24 S., Rs. 16 and 17 W., the course being N. 89°59' E., the distance 478.63 chs. and the fractional distance being placed in the west half mile.

The north and east boundaries of this township have been previously surveyed, but in accordance with the instructions issued for the survey of this township, all the original cors. found were destroyed and a resurvey made of both these boundaries.

RESURVEY OF THE

WAH WAH GUIDE MERIDIAN THROUGH T. 24 S., Rs. 16 and 17 W. .

Chains

From the cor. of Ts. 24 and 25 S., Rs. 16 and 17 W.,
which is described in the notes of the survey of the
N. bdy. of T. 25 S., R. 17 W.

North, on a resurvey line bet. secs. 31 and 36.

Ascend gradually over rolling SW. slope through scatter-
ing undergrowth.

9.10 Wash, 60 lks. wide, 4 ft. deep, drains S. 30° W.

28.60 Old road, bears NE. and SW.

40.00 On gentle SW. slope, 40 ft. above the sec. cor.

Set an iron post, 3 ft. long, 1 in. diam., 27 ins. in the
ground, for $\frac{1}{4}$ sec. cor., with brass cap marked.

RESURVEY OF THE NORTH BOUNDARY OF T. 24 S., R. 17 W.

From the cor. of Ts. 23 and 24 S., Rs. 16 and 17 W.

West, on random line along the north boundary of the
township, setting temp. sec. and $\frac{1}{4}$ sec. cors. at inter-
vals of 40.00 chs., and at: 478.63 chs., intersect the
W. bdy. of T. 23 S., R. 17 W., 14 lks. N. of the cor.
of Ts. 23 and 24 S., R. 17 W. which is described in the
survey of T. 24 S., R. 18 W. Thence:

N. $89^{\circ}53'$ E., on true line, bet. secs. 6 and 31.

Note: No trace of any of the original cors. were found
on this boundary.

Ascend gradually over rolling land through scattering
timber and undergrowth.

38.63 On gentle SW. slope, 180 ft. above the township cor.

Set an iron post, 3 ft. long, 1 in. diam., 27 ins. in the
ground, for $\frac{1}{4}$ sec. cor., with brass cap marked.

S31
 $\frac{1}{4}$
S6

1923

From which,

GENERAL DESCRIPTION OF T. 24 S., R. 17 W.

The land within the boundaries of this township, consists of the broken east and west slopes of a high ridge, which bears in a southerly direction from the north boundary of section 4, and which forms the divide between the southeasterly and southwesterly drainage of the township.

The soil consists of a deep rocky clay and sand loam; underlaid by limestone bedrock and which is exposed in numerous places near the tops of the high ridges and spurs.

The north portion of the township, is covered with a scattering growth of scrub juniper and pinon timber, which has no commercial value except for fire wood and fence posts.

The entire township is covered with a scattering undergrowth of shadscale, sagebrush, greasewood and native grasses, which affords fair grazing for stock during the winter months, there not being sufficient water in the township for grazing during the summer months. The only water in the township, is a small seep of good water known as Tunnel Spring, and is claimed by Walter James of Blackrock, Utah. This spring flows into a cement cistern from a tunnel, approximately 40 feet in length. The only other improvements in the township is a one room log cabin claimed by Walter James located near Tunnel Spring. Both these improvements are located in the SE. 1/4 of section 8.

None of the land in the township is suitable for farming, as the soil requires irrigating to produce crops and no water is available for this purpose.

Most any portion of the township can be reached by team and wagon, by the numerous roads found throughout the township, over which the stockmen haul their camp supplies to the different grazing sections of the surrounding country.

GENERAL DESCRIPTION OF T. 24 S., R. 17 W.

No indication of oil shale, coal, or mineral were found in the township, and no settlers were on the township at the time of the survey.

The magnetic declination was not taken on account of a defective needle.

GENERAL DESCRIPTION.

The land in this township ranges from rolling hills to gently rolling bench land. The general drainage is in a northwesterly direction.

There is a scattering stand of juniper and pinon in the extreme southern extremity of the township. The remainder having no timber. The predominating types of undergrowth are sagebrush, yellow top, mountain rush, buckbrush, and bunch grass. The timber is of no commercial value.

A sandy clay loam prevails throughout the entire area, with some gravel and fragmentary rock.

There is no water to be found for any purpose.

Generally the soil is unfit for agriculture on account of its rocky nature.

The grasses in evidence are scattering and only fair grazing can be had.

No mineral of any type of value has been found.

There are no settlers or improvements.

TRANSITMEN CERTIFICATE OF UNITED STATES SURVEYOR

Chas. F. Moore
We, ~~F.~~ Elmer L. Smith

Transitmen

U. S. ~~Surveyor~~, hereby certify upon honor that, in pursu-

of special instructions received from the U. S. Surveyor General for Utah

bearing date of the 16th day of March, 1921, ~~I~~ We have well, faithfully, and

in ~~our~~ own proper person^s, and in strict conformity with said instructions, the Manual of Surveying Instru-

tions, and the laws of the United States, surveyed all those parts or portions of the Utah-Nevada

boundary line, the N. boundary, and subdivisions of T. 24 S., R. 20

of the Salt Lake Base

and Meridian, in the State of Utah

on dates shown on said diagram and date diagram the foregoing field notes as having been executed by ~~us~~ ^{us} and under ~~our~~ ^{our} direction; and that all the corners

said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instru-

tions, and the special written instructions of the U. S. Surveyor General for Utah

and in the specific manner described in the field notes, and that the foregoing are the original field notes such survey.

Moab Utah June 7-1924

Chas. F. Moore

Los Angeles, Calif., May 6, 1924

Elmer L. Smith

APPROVAL.

U. S. Transitman

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 28, 1924

The foregoing field notes of the ~~survey of~~ resurvey of Utah-Nevada boundary line and north boundary; and survey of the subdivisional lines Township No. 24 South, Range No. 20 West, of the Salt Lake Base and Meridian, Utah

executed by Chas. F. Moore and Elmer L. Smith

under ~~his~~ special instructions dated March 22, 1921, 1921, having been critically examined, and the necessary corrections and explanations made, the said ~~resurvey~~ ^{resurvey} and ~~the~~ ^{the} surveys they describe, are hereby approved.

E. A. Johnson
U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in

, has been correctly copied from the original notes on file in this office.

---	--	--	--	--	--

Lines in black surveyed by Chas. F. Moore, U. S. Transit-
man.

Lines in red surveyed by Elmer I. Smith, U. S. Transit-
man.

Survey commenced August 30, 1923 and executed with Young & Sons solar transit No. 8570, used by Chas. F. Moore, U. S. Transitman, and Young & Sons solar transit No. 8534, used by Elmer L. Smith, U. S. Transitman. The instruments are equipped with Smith solar attachments and full vertical circles; the horizontal limbs being provided with two double verniers, placed opposite to each other and reading to the single minutes of arc, which is also the least count of the latitude and declination arcs and the vertical circles. Unless otherwise specified all lines were run with meridians established with the solar attachments.

The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for District No. 6, in assignment instructions dated May 21, 1923, conditional upon satisfactory field test.

September 1, 1923, in our camp in the $SE\frac{1}{4}SE\frac{1}{4}$ of section 21, T. 23 S., R. 18 W. of the Salt Lake Base and Meridian, in approximate latitude, $38^{\circ}48'$ N., and longitude, $113^{\circ}50'$ W., I examine the adjustments of both instruments and correct all errors. I compare the solar apparatus by their indications hourly with the meridian established by a Polaris observation as follows:

At the same station, September 1, 1923, at 8h 57m p.m. local mean time, or 9h 30m 7s p.m. by my watch, which I found to be 33m 7s fast of local mean time by a meridian observation. I observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 10 chains N.

Azimuth of Polaris at eastern elongation = $1^{\circ}25'30''$

This observation was taken with Young & Sons solar transit N. 8570, Used by Chas. F. Moore.

Sept. 2, 1923, at the same station, I lay off the

the azimuth of Polaris, $1^{\circ}25'30''$ to the west and mark the meridian thus determined, by a nail in a hub driven firmly in the ground, about 10 chs. N.

September 2, 1923, at the same station, 9h 0m a.m.

apparent time, with both instruments in the meridian, I set off $38^{\circ}48'$ N. on the latitude arcs, $8^{\circ}10'$ N. on the declination arcs, and determine meridians with the solars, which I find to agree with the true meridian.

At apparent noon, using Young & Sons solar transit No.

8570, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb, and the transit of the sun's W. limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's E. limb.

Mean observed altitude $59^{\circ}18'40''$

Reduced latitude $38^{\circ}48'15''$

Mean watch time of observation 12h31m42.5s

Watch time fast of local mean time 33m 7s

At apparent noon, with both instruments in the meridian and the latitude arcs unchanged, I find the reading of the declination arcs to be $8^{\circ}06'$ N., which agrees with the computed declination of the sun.

At 4h 0m p.m. apparent time, with the latitude arcs unchanged, I set off $8^{\circ}23'$ N. on the declination arcs and determine meridians with the solars, which I find to agree with the true meridian.

As all of the solar observations taken during the usual hours of solar work come within $1'$ of the true meridian I conclude that the adjustments of the instruments to be satisfactory.

MEASUREMENTS.

Unless otherwise specified all measurements are made

Chains

with Lallie steel ribbon tapes, 5 chs. in length compared with Lufkin standard steel tape, 1 ch. in length and found to be correct. The measurements are made on the slope, the vertical angles determined and the slope measurements properly reduced to true horizontal distances.

FINAL TEST OF INSTRUMENTS.

For final test of instruments at the completion of the survey see field notes of T. 26 S., R. 15 W. of group 95, under the heading of Test of Instruments.

RETRACEMENT OF THE EAST BOUNDARY OF T. 23 S., R. 19 W.

From the corner of Tps. 23 S., Rs. 18 and 19 W., which is a limestone, 18x12x4 ins. above the ground; for description of corner and accessories see field notes of T. 24 S., R. 19 W. of this Group.

North, on a retracement line, along E. bdy. of sec. 36.

39.98 Fall 18 lks. W. of $\frac{1}{4}$ sec. cor., which is a limestone, 8x6x6 ins. above the ground, properly marked and witnessed as described by the Surveyor General.

The true bearing and distance of this $\frac{1}{2}$ mile is N. 0° 15' E. and the distance is 39.98 chs.

Offset over $\frac{1}{4}$ sec. cor. and continue N. on a retracement line.

40.91 Fall 28 lks. W. of the cor. of secs. 25, 30, 31 and 36, which is a limestone, 14x6x6 ins. above the ground, properly marked and witnessed as described by the Surveyor General.

The true bearing and distance of this $\frac{1}{2}$ mile is N. 0° 24' E., 40.91 chs.

Retracement of the East Boundary of T. 23 S., R. 19 W.

Chains

From the cor. of secs. 25, 30, 31 and 36.

North, on a retracement line, along E. bdy. of sec. 25.

38.73 Fall 1 $\frac{1}{2}$ lks. W. of the $\frac{1}{4}$ sec. cor., which is a limestone, 26x10x3 ins. above the ground, properly marked and witnessed as described by the Surveyor General.

The true bearing and distance of this $\frac{1}{2}$ mile is
N. 0° 15' E., 38.73 chs.

Offset over $\frac{1}{4}$ sec. cor., and continue North on retracement line.

40.08 Fall 9 lks. W. of the cor. of secs. 19, 24, 25 and 30, which is a limestone, 12x8x6 ins. above the ground, properly marked and witnessed as described by the Surveyor General.

The true bearing and distance of this $\frac{1}{2}$ mile is
N. 0° 8' E., 40.08 chs.

From the cor. of secs. 19, 24, 25 and 30.

North, on a retracement line, along E. bdy. of sec. 24.

40.65 Fall 6 lks. W. of the $\frac{1}{4}$ sec. cor., which is a limestone, 12x6x6 ins. lying on top of the ground, marked $\frac{1}{4}$. I take this point for the true position of $\frac{1}{4}$ sec. cor. as evidences show that this cor. has not moved.

The true bearing and distance of this $\frac{1}{2}$ mile is
N. 0° 5' E., 40.65 chs.

Offset over $\frac{1}{4}$ sec. cor., and continue North on retracement line.

GENERAL DESCRIPTION.

This township consists of hilly and broken mountainous land. The SE $\frac{1}{4}$ of the township, and the extreme west range of sections of the township, consist of rolling bench land. A divide ridge enters the township at the south boundary of section thirty one and bears in a north easterly direction, thru the township and out of the township on the North boundary of section two. From this divide ridge, the land to the west has a general west drainage, but the land east of this ridge is so badly cut up and broken by spurs and draws, which do not come from ridge the the drainage can not be termed to any general direction.

The soil has about the same texture thru out the entire township; it consists of a rocky and gravelly clay loam, which may be termed as third rate.

T. 23 S., R. 18 W.

The township is covered with a scattering growth of juniper and pinon pine, and also a medium growth of sagebrush, yellow top, shadscale, and bunch grass. There is also found on different parts of the township, mountain rose, mountain mahogany, and bitter brush. This township affords fair grazing for stock, especially sheep. This area is best adapted for winter range as there are water supplies on the township and the winter snows will supply water for the stock. There are no settlers or improvements, except the roads, which are in very poor condition, to be found on this township.

No indications of coal, oil, or minerals were found.

FIELD ASSISTANTS.

6-2764

TRANSITMEN CERTIFICATE OF UNITED STATES SURVEYOR

We, Chas. F. Moore and Elmer L. Smith, U. S. Transitmen

of special instructions received from the U. S. Surveyor General for Utah

bearing date of the March day of 22nd, 1921, I have well, faithfully, and

our in my own proper person and in strict conformity with said instructions, the Manual of Surveying In-
structions, and the laws of the United States, surveyed all those parts or portions of Retracement of
East Boundary of T. 23 S., R. 19 W., and Resurvey of the West Bound-
ary, and Survey of the North Boundary, East Boundary and Subdivisi-
on of T. 23 S., R. 18 W.

of the Salt Lake Base

and Meridian, in the State of Utah

the foregoing field notes as having been executed by ^{US} me, and under ^{CUR} my direction; and that all the corners
said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instru-
ctions, and the special written instructions of the U. S. Surveyor General for Utah

and in the specific manner described in the field notes, and that the foregoing are the original field notes of
such survey.

Chas. F. Moore

U. S. Transitman U. S. Surveyor

Elmer L. Smith
U. S. Transitman

APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 28, 1924

The foregoing field notes of the survey of retracement of the east boundary of
Township No. 23 South, Range No. 19 West; resurvey of the west bounda-
ry and survey of the north and east boundaries and subdivisional lines
of Township No. 23 South, Range No. 18 West of the Salt Lake Base and
Meridian, Utah,

executed by Chas. F. Moore and Elmer L. Smith

under his special instructions dated March 22, 1921

critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys
they describe, are hereby approved.

E. A. Johnson
U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in
has been correctly copied from the original notes on file in this office.
